PUBLIC COMMENT FOR THE RECORD

Date: September 17, 2026

Subject: Protecting Municipal Autonomy and Privacy Against the Expansion of Warrantless Surveillance Software

Submitted By: Augustus Chell (Williamsburg / District 104 Resident)

Contact: amcforliberty@gmail.com

My name is Augustus Chell. I am 21 years old and a proud resident of Williamsburg. I work a real, working-class job down at the Traverse City Gordon Food Service. I am standing here today because I love my Nation, my State, and our beautiful home here in Northern Michigan. This love dictates my firm belief that every single individual is equal, and valued the same under the law.

Right now, our nation's sacred promise of liberty, justice, and human dignity for all is facing an unprecedented assault from an unregulated AI surveillance grid. As it stands, this board holds the direct budgetary oversight that sustains its operational foundation here in Antrim County.

A wave of invasive, unregulated artificial intelligence digital surveillance grids is sweeping across our great nation and systematically creeping across our county lines. What is worse, it is doing so by deliberately exploiting a fragmented procurement strategy designed to evade your centralized legislative oversight and public financial accountability. We have been told that because the Antrim County Board of Commissioners has never formally voted to establish a countywide contract with Flock Safety, the county remains completely unentangled and our taxpayers free of burden. That narrative is a dangerous, fundamentally flawed misunderstanding of how this shared database matrix operates.

This great county is already compromised with eight active Flock cameras deployed on our roads, and three more quietly moving through the procurement pipeline. We already have an active camera sitting in an Eastport commercial parking lot, taking surveillance pictures of local residents driving east on M-88. Just this past July, the Forest Home Township Board capitulated to this exact pressure, approving a recurring rental agreement for a Flock Safety camera at an annual subscription price of approximately three thousand dollars per unit. Sheriff Kevin Hoch has been actively touring township and village meetings across our county, lobbying local trustees to sign these independent software service contracts. This creates a highly fragmented jurisdictional patchwork that completely strips this Board of Commissioners of its traditional role as the manager of countywide technology standards and budgetary guardrails.

To make matters worse, the vendor is executing a predatory, divide-and-conquer strategy to bypass this room entirely. Because they know a centralized county board will demand public hearings, ask tough questions about constitutional privacy, and scrutinize long-term subscription liabilities, they are quietly going township by township. They are securing backroom deals with individual local boards away from the central media spotlight. This is exactly what happened in Grand Traverse County; the City of Traverse City and the Downtown Development Authority listened to the public and explicitly rejected a contract for

downtown Flock cameras. Yet, the Grand Traverse County Sheriff's Office bypassed that democratic choice, exploiting local jurisdictional lines by maneuvering through individual township boards like Garfield, East Bay, and Peninsula to quietly ring the city borders with an automated surveillance wall, forcing residents and commuters to be tracked by a network they already democratically rejected.

The hard truth is that Antrim County residents are already heavily tracked by this technology, and your local county resources are already being used to subsidize it. Even though this central board has never authorized a capital expenditure to purchase this hardware, Antrim County taxpayers are picking up the tab right now through an unvoted backdoor financial loophole. The Sheriff’s office and local police forces retain full, unrestricted back-end operational access to this pooled global network. This means our county-funded deputies and investigators are actively dedicating taxpayer-funded staff hours, administrative overhead, computer network capacity, and patrol time to monitoring automated alerts, conducting historical searches, and managing data integration. When an Antrim County employee spends their on-the-clock shift managing or executing data queries through a private database, that is local tax revenue being funneled into a private tech firm's ecosystem without an explicit appropriation vote by this commission.

Every single day, thousands of working-class commuters from Elk Rapids, Torch Lake, and right here in Bellaire drive south down the US-31 and US-131 corridors. They cross the border to go to their jobs, engage in retail commerce, or access essential medical care at Munson Medical Center. The exact moment those families cross the county line, they enter a dense trap of twenty-eight active Flock Safety cameras blanketed across Grand Traverse County, concentrated heavily in high-traffic corridors through Garfield, East Bay, and Peninsula Townships. According to certified operational data, this twenty-eight-camera array captures, logs, and processes nearly 450,000 vehicle photographs every single thirty days. My own movements are cataloged arriving to and leaving work due to the camera tracking intersections right outside my workplace at South Airport and Barlow. This out-of-state corporate artificial intelligence does not merely scan letters and numbers on a license plate. It isolates and constructs a permanent, searchable vehicle fingerprint. It indexes not only your make, model, and color but your unique bumper stickers, roof racks, dents/damage, and rust patches. This is the warrantless tracking of law-abiding citizens who have committed absolutely no crime and who never voted to give up their personal privacy. This system completely subverts the sacred presumption of innocence by treating every local driver like a permanent criminal suspect until proven otherwise. Taxpayers are being forced to financially underwrite the very infrastructure that destroys their own constitutional rights, effectively paying a corporate entity to strip them of their privacy.

Communities across our state and nation are waking up to this liability, and prominent municipal boards right here in Michigan—including Rochester, Ferndale, Clawson, and Milford Township—have all formally voted to terminate, scale back, or reject their surveillance camera contracts over severe privacy and oversight concerns.

THE MICHIGAN RESISTANCE INDEX

- **Grand Traverse County:** The central Board has no voted contract. The vendor secured side-deals through Garfield, East Bay, and Peninsula Townships to quietly ring the city perimeter with a 28-camera dragnet processing 450,000 vehicle fingerprints monthly.
- **Antrim County (Target Forum):** The central Board has no voted contract. The network relies entirely on fragmented township penetration, including an independent July 2026 contract by Forest Home Township for $3,000 per camera, establishing an unvoted 8-camera array on local roads.
- **Monroe County:** The central Board refused countywide infrastructure backing. In September 2026, when given an ultimatum to fund the software backend independently, the Bedford Township DDA voted to immediately terminate their agreement.
- **Oakland County:** On September 8, 2026, the Independence Township Board voted unanimously to terminate its agreement, rip out its 8 operating cameras, and force the vendor to sign an affidavit proving all collected citizen tracking data was permanently purged.
- **Kalamazoo County:** Faced with aggressive corporate lobbying to embed automated networks outside public view, public backlash forced county officials to adopt a strict policy barring any future contracts or renewals without explicit Board approval.
- **Oceana County:** Trial expansions and equipment deployments were pushed past central review. Severe public outcry over privacy forced the Sheriff's Office to completely pull the plug, freeze installations, and order immediate equipment removal.
- **Kalkaska County:** Currently uncompromised with 0 active cameras on local roads. Local organizers are utilizing proactive data briefs to establish an area-wide advisory moratorium before corporate sales tours can penetrate township lines.

THE NATIONWIDE COUNTER-OFFENSIVE

This subversion is a national corporate playbook enveloping over 7,000 law enforcement agencies. However, a massive wave of national pushback has ignited, with over 149 cities and counties aggressively dismantling these networks:

- **The Local Government Cascade:** Since the beginning of 2026, at least 57 major municipalities and counties have deactivated, canceled, or explicitly rejected contracts with the vendor.
- **The Los Angeles Suspension:** In July 2026, Los Angeles completely suspended the use of 138 pole-mounted security cameras following public backlash over data privacy and the lack of strict municipal guardrails.
- **The North Carolina Bipartisan Alignment:** In Macon County, North Carolina, a historic coalition described by local commissioners as "work boots and Subarus" united over shared privacy concerns, forcing a unanimous vote by the County Commission to end their entire contract.
- **The Judicial Decommission Mandate:** On September 11, 2026, the Prosecuting Attorney for Kosciusko County, Indiana, issued a sweeping Administrative Order commanding all local law enforcement agencies

to pull down and disable the entire network after the County Council discontinued funding to protect ongoing prosecutions from tainted data pipelines.

- **The Federal Defunding Counter-Strike:** On September 15, 2026, a bipartisan federal coalition introduced the No FLOCK Act in Congress. This bill directs the U.S. Secretary of Transportation to withhold 10% of annual federal highway, road, and bridge funding from any state that fails to strictly ban these automated surveillance networks for anything outside of limited felony investigations.

This is a company built on extreme corporate overreach and intentional deception. Flock has explicitly misrepresented core facts in its own public-facing privacy materials, claiming that "no one from Flock can view this footage." Yet, recent federal class-action lawsuits like Schulte v. Flock Group Inc. and internal department audits have exposed this as a flat-out falsehood. Company logs proved that Flock vice presidents and employees routinely access private camera feeds—including sensitive settings like community centers, playgrounds, and daycare facilities—for internal sales demos without the knowledge or permission of those being filmed. Flock also intentionally designed their physical infrastructure with hardware modules that were not yet locally authorized or legally permitted, ensuring that silent, sweeping expansions of general surveillance capabilities required nothing more than a remote, backend software update. The physical capability for broader, unconstitutional spying is already mounted on utility poles, completely bypassing public debate and the will of the people.

The deeper we look into this out-of-state corporation, the cloudier and more deceptive their operations become. In a widely verified July 2026 investigative report by independent journalist TommyG, attempting to secure a basic interview or corporate meeting with Flock Safety was met with systemic stonewalling and evasion. The company treats its physical operations like a state secret, keeping its corporate headquarters hidden off standard navigation platforms like Google Maps. When TommyG finally navigated corporate gatekeepers to secure a scheduled meeting, company executives completely evaded the press by abruptly relocating their multi-floor headquarters to the Medici building in Buckhead at the end of June 2026, hiding behind a secure facility that bore no visible external corporate branding or public signage.

Furthermore, the company actively weaponizes local emergency services to silence public oversight. As documented in a September 2026 InvestigateTV report, when journalists, auditors, and everyday citizens attempt to photograph or document these camera systems operating in plain view on public roads, corporate employees repeatedly call 911. This corporate aggression was explicitly demonstrated on August 19, 2026, in Milton, Georgia, when a technician called emergency services on an investigative reporter filming a public camera upgrade, and similarly on June 5, 2026, in Smyrna, Georgia, when management summoned police to remove citizens filming outside a facility. In shocking displays of corporate-directed overreach, responding police officers have physically blocked entire public roadways with patrol cars, trapping innocent citizen vehicles on the street purely because a private contractor's workers objected to being observed. This constitutes a severe violation of our First Amendment rights, due process, a total suspension of the right to travel freely on public roads, and a dangerous misuse of local taxpayer-funded law enforcement resources to act as private corporate security guards.

We must also confront the terrifying potential for tracking abuses. Independent legal watchdogs have just launched a national database documenting over one hundred severe cases of rogue officers abusing

license plate grids to stalk women, mistresses, and romantic rivals. We are seeing this reality play out right now in Milwaukee, Wisconsin and McHenry County, Illinois, where officers used the system to stalk ex-girlfriends, and in Florida where a sheriff used the police network and tracking cameras to stalk an actress after she rejected his advances.

Worse yet, public records and civil liberties investigations have revealed that this technology is notoriously prone to severe algorithmic error. In major metropolitan audits, up to 70% of automated stolen vehicle alerts generated by these camera grids were flagged as completely false positives. These are not harmless computer glitches; they have directly resulted in innocent motorists being subjected to high-risk felony traffic stops, where everyday citizens are forced out of their vehicles at gunpoint by police officers acting on faulty, unverified corporate data.

Flock is not an isolated law enforcement tool; it is a foundational stepping stone to upend our Constitution by feeding data into a broader digital tracking matrix. This localized tracking grid directly mirrors macro-financial surveillance models currently being engineered globally under Project Agorá. Orchestrated by the Bank for International Settlements alongside seven major global central banks—including the Federal Reserve Bank of New York—this initiative consolidates private financial transactions onto a single, unified programmable ledger to facilitate real-time automated tracking and implement smart-contract programmable restrictions over private deposits. A critical danger arises when this centralized financial ledger converges with federal automotive infrastructure, specifically the government-mandated vehicle kill-switch framework enacted under Section 24220 of the Infrastructure Investment and Jobs Act, Public Law 117–58. This federal law directs the Department of Transportation and the National Highway Traffic Safety Administration to establish safety standards forcing advanced impaired driving prevention technology into all new passenger vehicles. These passive surveillance systems are designed to constantly monitor driver performance, giving the system the algorithmic authority to limit or entirely prevent vehicle operation. When a centralized authority controls your ability to pass through an automated camera wall, overrides your engine via federal mandate, and monitors your transaction ledger, individual liberty ceases to exist. If individual townships continue to sign these independent agreements, our public roadways will be systematically privatized by algorithmic tracking without a cohesive, countywide public debate.

Our collective priorities in Northern Michigan are fundamentally broken when we allow high-tech corporate surveillance subscriptions to sneak into our communities while our physical infrastructure rots. The working-class families of House District 104 are facing massive, dangerous, and immediate infrastructure deficits. The recent, high-profile collapse of the Beitner Bridge in Garfield Township stands as a lethal warning of what happens when local governance prioritizes paying recurring tech-vendor software fees over maintaining concrete, steel, and physical pavement. Nearly 20,000 drivers are forced to detour and an additional 25,000 commuters are facing daily gridlock on surrounding corridors due to the bridge closure. Everyday people do not want their daily movements cataloged and indexed by an out-of-state tech corporation just to drive to work or buy groceries. They want safe roads, secure bridges, and public funds dedicated strictly to transparent, physical infrastructure.

Over a million heroes have died for our liberty, and millions more have given everything they had and sacrificed for our pursuit of happiness. It is our absolute civic duty to stand up for what is right, to protect our nation, and to live and die free. Flock is just another stepping stone to upend our Constitution and we must defend the privacy of taxpayers.

You hold the absolute power of the purse over the county personnel and software infrastructure required to make this network function. I urge this Board to stand up for liberty and protect the privacy of our taxpayers. Please consider the three direct budgetary actions and the supporting fourth pillar detailed before the appendix of my written statement: defund the backend integration software, institute a strict zero-county-labor policy for warrantless tracking, and mandate independent search audits.

We must never hold safety so dear that we are willing to forfeit our liberty. Pull the plug on Flock Safety, stand up for liberty, and defund the Sheriff's use of this grid.

Thank you.

PROPOSED LEGISLATIVE & BUDGETARY ACTIONS

PROPOSED ACTION 1: LINE-ITEM APPROPRIATIONS RESTRICTION & BACKEND BLOCKADE

1. Statutory Authority & Legal Mechanism

This action is executed pursuant to the Michigan County Boards of Commissioners Act (PA 156 of 1851; MCL 46.11), which grants the Board of Commissioners exclusive legislative authority over county property, technology infrastructure, and line-item budget appropriations. Under settled Michigan law (Judicial Attorneys Ass'n v. State of Michigan, 1999), while an elected Sheriff maintains operational autonomy over internal law enforcement deployments, the Board retains absolute power over the public purse, including the authority to place strict, categorical restrictions on how county funds are spent.

STEP-BY-STEP IMPLEMENTATION BLUEPRINT

1. **Lump-Sum De-integration:** During upcoming county budget amendments, the Board will formally strip all software, database, API, and cloud subscription funding out of the Sheriff's general operational pool.
2. **Restricted Line-Item Segregation:** Create a dedicated, isolated budget line-item titled: Line-Item 101-301-851.000: Restricted Digital Subscriptions & Cloud Services.
3. **Insertion of Prohibitive Boilerplate Language:** Insert the following legally binding rider directly into the annual county appropriations resolution:
   "No funds appropriated under Line-Item 101-301-851.000, nor any other public revenues under the fiscal control of this Commission, shall be encumbered, transferred, or expended to purchase, lease, renew, integrate, or maintain application programming interfaces (APIs), software-as-a-service (SaaS) cloud databases, server access tokens, or back-end network integrations owned or operated by third-party automated license plate reader (ALPR) vendors, specifically including Flock Group Inc. (d/b/a Flock Safety)."
4. **Centralized IT Gateway Blockade:** Issue a direct legislative directive to the Antrim County Information Technology Director. Under the Board's authority over county-owned property, the IT Director shall implement a persistent firewall block at the county network gateway level, rejecting all incoming and outgoing packets routing to known Flock Safety server clusters, domains, and cloud endpoints (e.g., *.flock.com), rendering backend software integration technically non-functional on all county-owned mobile data terminals (MDTs) and office workstations.

PROPOSED ACTION 2: STATUTORY BUDGET RIDER & ZERO-COUNTY-LABOR POLICY

1. Statutory Authority & Legal Mechanism

This action utilizes the Board's statutory power to attach specific, binding conditions to departmental appropriations. While the Board cannot legally interfere with the day-to-day managerial operations of the Sheriff, it holds the explicit right to define the types of labor the county budget is authorized to underwrite. By establishing a zero-labor policy for warrantless mass-dragnet data processing, the Board sets a firm boundary protecting county personnel assets from being absorbed into an unvoted, private corporate data-sharing matrix.

STEP-BY-STEP IMPLEMENTATION BLUEPRINT

1. **Drafting the Personnel Rider:** Attach a legally binding rider to the Sheriff's Office personnel budget allocation (Line Item 101-301-702.000: Salaries & Wages).
2. **Establishing the Warrant Standard:** The language of the rider must explicitly dictate the legal baseline required before county-funded staff hours can be converted into private surveillance operations: "As a strict condition of this appropriation, zero county-funded employee hours—including road deputies, corrections officers, administrative clerks, and dispatch personnel—shall be allocated to monitoring, processing, executing queries, or responding to real-time automated alerts generated by automated license plate reader networks, unless a human investigator first links the specific query or target vehicle to an active criminal case number supported by a signed search warrant from a neutral judicial officer."
3. **Exclusionary Exceptions:** Provide a narrow carve-out strictly limited to life-safety emergencies, defined exclusively as active AMBER Alerts, Endangered Silver Alerts, or immediate, active tracking of fleeing violent felons with verified probable cause documented in writing prior to database access.
4. **Clawback Enforcement Auditing:** Establish an enforcement mechanism requiring the County Administrator to cross-reference the Sheriff’s departmental overtime and shift logs against data access logs. Any staff hours found to have been spent executing warrantless historical searches or monitoring township-funded hot-lists shall be deemed an unauthorized expenditure of public funds. The Board will automatically execute a dollar-for-dollar clawback penalty, reducing the Sheriff’s discretionary administrative travel and training budget for the subsequent fiscal quarter by the exact value of the unauthorized labor hours.

PROPOSED ACTION 3: CENTRALIZED AUDITING ARCHITECTURE & INDEPENDENT THIRD-PARTY AUDITS

1. Statutory Authority & Legal Mechanism

Under federal and state regulations, access to Criminal Justice Information Services (CJIS) data requires strict logging to prevent stalking, personal surveillance, and civil rights violations. The Board of Commissioners possesses the authority to mandate local compliance audits as a condition for utilizing county-owned tech assets. This action implements an independent, non-police oversight mechanism to ensure public employees do not weaponize centralized digital tracking tools against private citizens.

STEP-BY-STEP IMPLEMENTATION BLUEPRINT

1. **Centralized Log Replication:** Issue a technology mandate requiring that any law enforcement search platform or private surveillance software utilized by county staff must be configured to automatically

replicate its internal user access logs and query history to a secure, read-only county server managed exclusively by the civilian County IT Department. This prevents logs from being deleted, altered, or shielded by internal departmental policies.

2. **Procurement of Independent Civilian Auditors:** Appropriate a small, dedicated allocation (not to exceed $5,000 annually) from the county's general administrative fund to contract with an independent, third-party cybersecurity or civil liberties auditing firm.
3. **Mandatory Quarterly Review:** The independent contractor shall conduct a comprehensive quarterly audit of 100% of the vehicle tracking and license plate queries executed by county personnel. The auditor will cross-reference every individual user login and search query against active, documented incident report numbers kept by the court clerk or prosecutor's office.
4. **Automatic Credential Revocation Protocol:** Implement an automated compliance rule: if the independent audit reveals that an employee executed a historical tracking query or ran a vehicle plate search without a valid case number, documented probable cause, or judicial warrant, the auditor shall immediately flag the account. The policy mandates that the County IT Director must automatically suspend that user's network access credentials to all county cloud networks pending a formal review by the county's administrative personnel committee and corporate counsel.

PROPOSED ACTION 4: INTERGOVERNMENTAL RISK NOTICE & ADVISORY TOWNSHIP MORATORIUM

1. Statutory Authority & Legal Mechanism

Township boards operate as independent corporate political entities under Michigan law and are not directly subordinate to county ordinances. However, the County Board of Commissioners serves as the central manager of regional law enforcement coordination and regional fiscal planning. While this Board cannot directly veto a contract signed by Forest Home, Torch Lake, or Elk Rapids Townships, it holds the absolute right to notify those municipalities that county resources will not be used to cross-subsidize or maintain their local hardware networks.

STEP-BY-STEP IMPLEMENTATION BLUEPRINT

1. **Passage of the Master Advisory Resolution:** The Commission will introduce and pass a formal resolution titled: "Resolution Declaring an Advisory Moratorium on Private Surveillance Infrastructure Expansion and Intergovernmental Resource Protection."
2. **Formal Risk Notification Document:** The resolution will outline the documented liabilities of the vendor, including federal class-action lawsuits regarding corporate data tracking abuses (Schulte v. Flock Group Inc.), high false-positive algorithmic error rates (up to 70% in independent municipal audits), and severe First Amendment overreach involving harassment of journalists documenting public property.
3. **Service-Level Termination Warning:** The core of the resolution will deliver a stark, unambiguous financial and operational warning to all township trustees:
"Be it further resolved, that the Antrim County Board of Commissioners formally notifies all township and village boards within our geographical borders that, pursuant to newly enacted County Policies 1 and 2, county-funded deputies, investigators, and dispatch personnel are strictly prohibited from monitoring,

integrating with, or responding to automated alerts generated by independently contracted, township-funded surveillance systems. Any township choosing to execute an independent agreement with Flock Safety does so with the explicit understanding that county resources will not support, underwrite, or respond to the hardware, and that no county personnel labor will be provided to validate its data."

4. **Altering the Township Financial Equation:** By sending this certified resolution to every township supervisor via registered mail, the county fundamentally breaks the vendor's business model. When local township trustees realize that county deputies are legally forbidden from monitoring or acting upon the cameras, they will understand that signing an independent contract means wasting thousands of dollars of local tax revenue on a system that local law enforcement cannot use. This effectively halts the fragmented, town-by-town expansion by rendering the cameras operationally useless at the municipal level.

APPENDIX: SPOKEN TRANSCRIPT

Good evening, Commissioners.

My name is Augustus Chell. I am 21 years old and a proud resident of Williamsburg. I work a real, working-class job down at the Traverse City Gordon Food Service. I am standing here today because I love my Nation, my State, and our beautiful home here in Northern Michigan. This love dictates my firm belief that every single individual is equal, and valued the same under the law.

Right now, our nation's promise of liberty, justice, and dignity is facing an unprecedented assault from an unregulated AI surveillance grid.

A narrative is circulating that because the Antrim County Board has never formally voted to establish a countywide contract with Flock Safety, our taxpayers remain completely unentangled. That narrative is a dangerous misunderstanding of how this shared database operates. The hard truth is that Antrim County is already compromised. Currently there are already eight active Flock cameras deployed on the roadways of Antrim County—including a camera sitting in an Eastport commercial lot tracking residents on M-88—and three more moving through the pipeline.

Sheriff Kevin Hoch is actively lobbying individual township boards to sign independent agreements, like Forest Home Township did this past July for three thousand dollars a year. This fragmented procurement strategy is explicitly designed to bypass this room, split local jurisdictions, and strip this Commission of its traditional budgetary guardrails.

Worse yet, Antrim taxpayers are picking up the backend tab right now through an unvoted financial loophole. The Sheriff’s office retains unrestricted operational access to this pooled global network, meaning county-funded deputies are actively dedicating taxpayer-funded staff hours, administrative overhead, and computer capacity to monitoring a private database.

This isn't just a localized issue; it directly traps the working-class families of Michigan House District 104. Every single day, thousands of commuters from Elk Rapids, Torch Lake, and right here in Bellaire drive south down the US-31 and US-131 corridors for work, commerce, or medical care. The exact moment they cross the county line, they enter a dense trap of twenty-eight active Flock cameras blanketed across Grand Traverse County that processes nearly four hundred and fifty thousand vehicle photographs every single month. My own daily commute to Gordon Food Service is cataloged by the cameras tracking the intersection at South Airport and Barlow. This out-of-state corporate technology isolates and constructs a permanent vehicle fingerprint of law-abiding citizens. It subverts the presumption of innocence by treating every local driver like a permanent criminal suspect until proven otherwise.

Our collective priorities are fundamentally broken when we allow recurring tech-vendor software fees to creep into our communities while our physical infrastructure rots. The recent, high-profile collapse of the Beitner Bridge stands as a lethal warning of what happens when local governance prioritizes private tech

contracts over concrete, steel, and physical pavement. Nearly 20,000 drivers are forced to detour and an additional 25,000 commuters are facing daily gridlock on surrounding corridors due to the bridge closure. Everyday people want safe roads and secure bridges, not digital checkpoints.

Over a million heroes have died for our liberty. It is our absolute civic duty to stand up for what is right, to protect our nation, and to live and die free.

You hold the absolute power of the purse. I urge this Board to adopt the three direct budgetary actions and a supporting fourth pillar detailed before the appendix of the written brief I have submitted to your Clerk: first, defund all backend integration software connections; second, institute a strict zero-county-labor policy requiring a signed warrant before any county personnel handle mass-dragnet data logs; and third, mandate independent search audits to stop tracking abuses. Finally, issue an official advisory moratorium to the township boards to halt these fragmented deals before our public roads are permanently privatized.

We must never hold safety so dear that we are willing to forfeit our liberty. Pull the plug on Flock Safety, stand up for liberty, and let’s focus our tax dollars on fixing our physical infrastructure.

Thank you.
