Good morning, Commissioners. My name is Augustus Chell, a resident of Williamsburg. I have submitted a 12-page legislative brief and a 4-page summary for the public record.

As I mentioned at the last meeting I'm an hourly wage worker at Gordon Food Service. The reason I am standing here today instead of at my job working is **to address a critical vulnerability in how Grand Traverse public assets and administrative labor are being utilized.** Private technology vendors bypassed this Commission's centralized legislative oversight by executing fragmented township contracts to ring Traverse City with an intrusive automated surveillance wall. These independent township cameras do not operate in a vacuum; they rely on an unvoted backdoor subsidy from this county, leveraging local county-funded dispatch, servers, and terminals to process private alerts. All while **Grand Traverse taxpayers pay the hidden operational cost** with our hard earned tax dollars and **our liberties**.

When I and other local workers pass through intersections like South Airport and Barlow, just to earn a living, we are forced to be tracked by technology we never voted on. This is a profound misalignment of local budgetary priorities. Our county infrastructure is fracturing beneath our feet, such as the culvert washouts on Beitner Road and the cracking walls of our fifty-year-old County Jail. Taxpayer dollars belong in local soil, pouring concrete and reinforcing steel, not cross-subsidizing private networks that forsake the presumption of innocence and expose us to massive liabilities.

Looking beneath the marketing veneer into the company's patent portfolio and software architecture, **the reality is far more invasive than simple license plate scanning.** Their machine-learning systems are engineered to profile human behavior, track daily patterns of movement, and place honest American citizens into a permanent digital lineup.

Last week, on October 1st, a federal court ruled in U.S. v. Kyle that **warrantless queries across these private networks amount to unconstitutional "indiscriminate mass surveillance".**

I am not here to hand you an unresolvable grievance; ***I'd like to thank Candidate Distin and his team of patriots, along with every single community member who***

stood up for freedom, for sharing our concerns. I am handing you an actionable legislative solution.

To avoid the constitutional trap of micromanaging an elected Sheriff's law enforcement duties, this framework **relies entirely on your undisputed statutory power over county property under MCL 46.11, sub-section I.**

Proposed Action 1 does not dictate deputy behavior; it directs the county's civilian IT Department to permanently scrub all proprietary vendor access keys and data tokens from county-owned devices.

To ensure this policy is established within the official public record, I am reading the core mandate of the Mandatory Budgetary Rider from page 9:

- **First: No public revenues**—including federal, state, or private grants—shall be expended to purchase, lease, or maintain software subscriptions or APIs managed by third-party ALPR vendors, specifically including Flock Safety.
- **Second: Pursuant to this Board's exclusive authority over county property under MCL 46.11**, the Grand Traverse County IT Department is directly ordered to audit all county-funded mobile terminals, workstations, and computing property.
- **Third: They must permanently remove and prohibit all** proprietary software interfaces, browser shortcuts, or database access tokens linked to these third-party surveillance networks.

This brief includes a strict exception for state-validated AMBER Alerts, ensuring public safety is never compromised.

As a proud resident of Grand Traverse County who believes in our nation's sacred promise of liberty and justice for all, I ask this Board to formally refer this package to Civil Counsel for immediate adoption. Thank you.
